PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of experience building and shipping production-grade web applications using React.js, Next.js, Node.js, Express.js, and MongoDB. Delivered measurable frontend performance improvements, architected TypeScript-based reusable component systems, and consistently shipped features on time within Agile teams. Experienced across the full stack — from designing REST APIs and backend services to building pixel-perfect, responsive interfaces from Figma designs. Passionate about writing clean, maintainable code and building products that are fast, scalable, and user-focused.

TECHNICAL SKILLS

Languages: Python , JavaScript(ES6+) , TypeScript.

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Material UI, Bootstrap, Framer Motion.

Backend : Node.js, Express.js, REST APIs, JWT Authentication

Database: MongoDB

Tools: Netlify , Git, GitHub, Postman, VS Code, MongoDB Compass, Excel.

Concepts: Responsive Design, API Integration, State Management, Agile Methodology, Version Control.

PROFESSIONAL EXPERIENCE

Frontend Developer | StarOpsTech

Aug 2025 – Present

- Optimized Next.js application performance through code splitting, lazy loading, and asset optimization, achieving up to 25% reduction in page load times and measurably improving Core Web Vitals scores.
- Architected and delivered a reusable TypeScript component library of 15+ strictly-typed React.js modules using Hooks and Context API, cutting redundant development effort across 3+ projects and eliminating a significant class of runtime errors through compile-time type safety.
- Translated 20+ Figma designs into pixel-perfect, fully responsive interfaces using Tailwind CSS and Material UI, reducing design-to-dev handoff time and ensuring visual consistency across desktop, tablet, and mobile.
- Integrated RESTful APIs using TypeScript interfaces and structured state management, enforcing strict type contracts between frontend and backend and improving data reliability during peak usage.
- Resolved 15+ frontend bugs across development cycles — including type-related runtime errors, cross-browser rendering issues, and layout regressions — reducing UI-related defects reaching production.
- Migrated key application modules to TypeScript, improving code predictability, reducing debugging overhead, and making the codebase significantly easier to maintain and scale.
- Drove adoption of reusable component patterns, typed props, and modular architecture within the team, reducing onboarding friction for new developers and improving sprint velocity over time.
- Delivered features across multiple Agile sprint cycles in close collaboration with designers, backend engineers, and QA — consistently meeting sprint deadlines without sacrificing code quality.

Web Developer | Uppingtrue Private Ltd.

Sep 2023 – Aug 2024

- Built and maintained 5+ responsive web applications using React.js, JavaScript (ES6), HTML5, and CSS3, directly supporting business operations across multiple client requirements.
- Connected frontend modules to Node.js/Express.js REST APIs, enabling reliable data flow between client and server and reducing integration-related bugs during feature delivery.
- Refactored UI components into a modular, reusable structure, cutting repetitive code by an estimated 30% and accelerating feature development across ongoing projects.
- Improved cross-browser and cross-device compatibility across Chrome, Firefox, Safari, and Edge, ensuring consistent user experience for a broader audience.
- Maintained clean version history using Git and GitHub, participating in code reviews and pull request workflows that improved overall team code quality.
- Diagnosed and resolved frontend issues during QA and post-deployment phases, reducing UI inconsistencies and improving release stability.
- Contributed across the full SDLC — from requirement analysis through development, testing, and post-release support — gaining end-to-end ownership of feature delivery.

EDUCATION

Dr. A.P.J Abdul Kalam Technical University Bachelor of Technology in Computer Science & Engineering	2023
CGPA: 7.4/10	
Chhatrapati Shahuji Maharaj University Bachelor of Science	2020
CGPA:5.4/10	

PROJECT

Ticketing System | Solo Project | React.JS | April.2025-May.2025

Technologies: React.js, Node.js, Express.js, MongoDB, Context API, JWT Auth

- Built a ticket management platform that allows users to raise issues and monitor their progress from creation to closure.
- Developed backend services for handling ticket creation, assignment, priority updates, and status tracking.
- Implemented separate user and admin workflows to streamline ticket handling and resolution processes.
- Used React Context API and Hooks to manage application state and provide a consistent user experience.
- Designed a responsive interface with filtering and search capabilities to help users quickly access ticket information.

Smart Attendance System | Solo Project | React.JS | Jan.2025-Feb.2025

Technologies: React.js, JavaScript, Node.js, Express.js, JWT Authentication, MongoDB, QR Code, Local Storage

- Developed a QR-based attendance system to record daily attendance for students and employees with minimal manual intervention.
- Implemented secure login and user management features using JWT authentication and role-based access control.
- Integrated QR code generation and scanning functionality to enable quick and accurate attendance marking.
- Created dashboards for viewing attendance records, tracking attendance history, and managing users.
- Designed REST APIs and MongoDB collections for storing attendance data and generating reports efficiently.

ADDITIONAL INFORMATION

Certificate: Hacker Rank: Python (Basic), JavaScript (Basic + Intermediate)
